Summary

Mobile Software Engineer delivering Android and Flutter applications across e-commerce and industrial B2B domains. Maintainer of AAY-Chart (660+ GitHub stars), a Compose Multiplatform (KMP) charting library. Proven track record of solving complex platform constraints—including Canvas rendering, industrial scanning pipelines, and legacy system migrations. Highly experienced with AI-assisted development, spec-driven workflows, MCP integrations, and agentic tooling.

Education

Mobile Native Scholarship | 9-month program Oct 2025 – Jun 2026
Information Technology Institute (ITI)

Bachelor of Engineering, Computer Engineering 2019 – 2024
Higher institute of engineering and technology - Behira

Professional Experience

Android Developer | Project Based May 2026 – Present
StartPoint 📄 Remote

- **Migrated** a legacy health-consultation Android app to Clean Architecture (feature-based modules), eliminating all third-party UI dependencies.
- **Built** a proprietary design system module from scratch — **no Material Design dependency** — covering theming, components, and motion tokens.
- **Refactored** legacy imperative code to Jetpack Compose, improving testability and reducing UI regression rate.

Mobile Developer Nov 2025 – Mar 2026
3Ebda Tech | تيك إبداع 📄 Remote

- Shipped **e-commerce** & business Android (Kotlin) and Flutter (Dart) apps across multiple client projects.
- Integrated REST APIs handling state management, error recovery, and edge cases for **2 production releases**.

Technical Mentor Mar 2025 – Jun 2025
The Chance 📄 Remote, Iraq

- **Mentored** early-career Android developers in architecture decisions, debugging strategies, and code quality standards.
- Facilitated team-based learning in a remote, cross-cultural setting—sharpened coaching and async communication skills.

Software Engineer Feb 2024 – Aug 2025
Firestone Apparel Factory 📄 Alexandria,Egypt

- **Improved factory productivity ~20%** by building barcode/QR scanning & traceability Android apps that replaced manual processes on the production floor.
- Delivered a **single Ktor backend** unifying mobile apps, machine monitoring dashboards, and third-party integrations — one codebase monitoring all factory operations.

Projects

AAY-Charts [↗](#)

Compose Multiplatform library

- Created and maintained a highly adopted **Compose Multiplatform (KMP)** charting library utilizing deep Canvas rendering optimizations.
- Scaled community adoption to **660+** GitHub stars and **50+ forks** by providing clean APIs, strict code reviews, and comprehensive documentation for developer integration.

StartPoint [↗](#)

Nutrition app | MVI/MVVM, Clean Architecture

- Migrated a legacy codebase to Jetpack Compose using **feature-based architecture**, reducing core technical debt and standardizing architecture.
- Eliminated bloated third-party dependencies by writing native platform solutions and establishing a highly **customizable design system module** independent of Material Design.

History Verse (Graduation Project) [↗](#)

AR Museums app | Jetpack Compose, ARCore, VPS, SceneView, TensorFlow Lite

- Built an **indoor spatial computing navigation system** using Google's Visual Positioning System (**VPS**).
- Rendered highly stable historical 3D model using **ARCore** and **SceneView**.
- Implemented a dynamic on-device itinerary generator utilizing a custom-optimized **A*(A-Star) pathfinding algorithm** factoring in spatial heuristics.
- Integrated on-device computer vision classification using TensorFlow Lite models for artifact identification.

SK Furniture [↗](#)

E-commerce app | Flutter, Dart, BLoC

SerineKamal is an enterprise-grade mobile platform bridging e-commerce with professional interior and exterior design services.

Weather app [↗](#)

Jetpack Compose, MVVM, Room DB, Koin, MapLibre SDK

Designed an **offline-first** weather system using a Single Source of Truth (SSOT) pattern that immediately serves local database storage.

YumYum

Food Planner app | Java 11, MVP Architecture, RxJava3, Room DB, Firebase Firestore

Architected a meal planner using XML and **MVP pattern**, managing complex asynchronous data streams and database queries via **RxJava3** to guarantee UI responsiveness.

Skills

Core Android Development

Kotlin, Java, Android SDK, Jetpack Compose, Android Jetpack, Room, WorkManager, Paging 3, XML

Networking

Retrofit, OkHttp, REST APIs

Architecture & Practices

Clean Architecture, MVVM/ MVI/MVP/MVC, SOLID, Modularization, Design Patterns, Unit Testing

Dependency Injection

Dagger Hilt, Koin

Concurrency & State Management

Kotlin Coroutines, Flow, RxJava, RxKotlin

Tools & AI

Agentic Workflows, Model Context Protocol (MCP), REST APIs, Git, CI/CD

Volunteering

GoogleDSC - BHI

Lead

Aug 2023 – Aug 2024
